MODELS & ADJUSTMENTS

THREADED SPRING PRELOAD ADJUSTMENT

All our shock absorbers come standard with a threaded preload adjustment that allows you to fine-tune the initial force applied on the springs and precisely balance the weight distribution across the front and rear wheels. This adjustment is required to set up the ride height (ground or chassis clearance) and to lower or raise the vehicle, allowing you to adapt to various situations or to suit your personal preferences.

You can easily adjust the preload by turning the red anodized ring located on top of the springs using the provided tool. A locking set-screw (3 mm Allen key provided) tightly secures the ring to prevent it from coming out of adjustment when riding. Although the preload adjustment procedure is easier to achieve when the vehicle is lifted on a stand, it can also be done on the trail.

STAGE 1 & STAGE 1 +R

STAGE 2 +R

STAGE 4

STAGE 5

FACTORY SHOCK

REBOUND DAMPING ADJUSTMENT

The rebound adjustment controls the speed at which the shock absorbers return to their fully extended position after being compressed from an impact. Although the rebound valving is customized for your riding type, sometimes you might need to further adjust the rebound.

Since not all riding conditions or tracks are the same, the rider will want to adapt the rebound damping to match them. By adjusting the rebound properly, the wheels can stay on the ground as much as possible to get maximum traction and reduce the bucking effect of the spring pressure pushing back after an impact. Elka Suspension offers two types of rebound adjusters (depending on vehicle model): an easy to use twisting knob and a compact adjuster that can be set with a flat screwdriver, both of which have detented clicks.

STAGE 2 +R

STAGE 4

STAGE 5

FACTORY SHOCK

DUAL HIGH-SPEED (BLACK KNOB) & LOW-SPEED (RED KNOB) COMPRESSION ADJUSTMENTS

Elka Suspension's High- & Low-Speed Compression adjustment is an internal cartridge with two distinct circuits that control the hydraulic resistance for both high-velocity and low-velocity oil displacement. This enables very advanced fine-tuning for different types of impacts that would otherwise require the rider to make a compromise between a more comfortable softer suspension and a high-performance harder suspension.

With this dual adjustment, the rider can have the suspension set to react differently for high-speed situations and low-speed situations at the same time. Learning and understanding how to dial-in the High- & Low-Speed Compression adjustment might require a little time and effort, but it will reward the rider with a suspension that work wonders over any kind of terrain and obstacles.

With this adjustment, the rider can fine-tune the shock absorbers to react differently for riding situations that would otherwise require a compromise to be made between opposed optimal settings. The High- & Low-Speed Compression adjustment is for riders who demand the highest performance and adjustability.

EXAMPLES OF SITUATIONS THAT AFFECT THE LOW-SPEED COMPRESSION

- Body roll when cornering
- Rear-end squatting under hard acceleration
- Front-end diving when braking
- Riding over whoops at moderate speed
- Undulations and elevation changes in the terrain

EXAMPLES OF SITUATIONS THAT AFFECT THE HIGH-SPEED COMPRESSION

- Landing from big jumps
- Harsh or sudden square-edged impacts
- Riding at high-speed over whoops
- Vibration when riding at very high speed or when riding over choppy terrain and tire tracks

STAGE 4

STAGE 5

FACTORY SHOCK

HIGH-FLOW DUAL COMPRESSION

Our new High-Flow Dual Compression adjuster is the latest evolution of our High- & Low-Speed Compression adjustment. With similar technology, it provides all the same benefits but pushes the envelope even further.

This dual adjustment device can precisely control a much bigger oil flow, three times as much as our previous generation. Such a massive oil flow provides a much smoother damping action without requiring as much precision when tuning it. With High-Flow technology, it is now much easier to achieve a perfect set-up for any riding conditions.

STAGE 5

PATENTED TRACK SYSTEM®

Elka Suspension's exclusive and patented TRACK System® device & adjustment provides a very smooth absorption of peak velocity forces caused by harsh impacts and high-speed vibrations to help reduce arm pumping and fatigue.

The purpose of the TRACK™ System is to increase shock performance over high-speed square edge bumps. It increases traction and control, by ensuring constant contact between the tire rubber and the track surface. It also reduces feedback through the handlebars, reducing the dreaded "harm-pump" and increases rider endurance.

The TRACK™ System momentarily reduces the hydraulic resistance of the shock absorber under extra high speed blows. The pressure threshold at which the TRACK™ System operates and the duration of the pressure relief can be controlled with the TRACK™ star shaped knob. The TRACK System™ will provide an advantage in different track conditions and on various surface types such as braking bumps, sharp edge whoops, high speed ripples, uneven terrain in corners, tree roots, holes, high speed ripples, rocks, holes, etc.

ABBREVIATION	ADJUSTMENT	DESCRIPTION
PRE	THREADED SPRING PRELOAD	ALLOWS FINE-TUNING OF THE VEHICLE'S RIDE HEIGHT (SAG)
REB	REBOUND DAMPING	CONTROLS THE SPEED AT WHICH THE SHOCK RETURNS TO ITS FULLY EXTENDED POSITION AFTER AN IMPACT OR COMPRESSION MOVEMENT
COMP	COMPRESSION DAMPING	CONTROLS THE OVERALL LEVEL OF RESISTANCE WHEN THE SHOCK IS BEING COMPRESSED (STIFF OR SOFT)
HS COMP	HIGH-SPEED COMPRESSION DAMPING	ALLOWS SEPARATE FINE-TUNING OF THE LEVEL OF RESISTANCE WHEN THE SHOCK IS QUICKLY BEING COMPRESSED (SQUARE-EDGE IMPACTS, HARSH LANDINGS, ETC.)
LS COMP	LOW-SPEED COMPRESSION DAMPING	ALLOWS SEPARATE FINE-TUNING OF THE LEVEL OF RESISTANCE WHEN THE SHOCK IS SLOWLY BEING COMPRESSED (BODY ROLL, ACCELERATION, CORNERING, ETC.)
TRACK	PATENTED TRACK SYSTEM™	PROVIDES ADDITIONAL RELIEF OF PRESSURE UPON EXTREMELY HIGH-VELOCITY IMPACTS THAT WOULD OTHERWISE OVERLOAD THE HS COMP CIRCUIT
